

Skydome for a car park in Vladivostok, Russia | Italy

Luogo:
Vladivostok, Russia
Prodotto
utilizzato: Skydome
Geoplast

The last important example of our international leadership is the use of SKYDOME formwork for the construction of a multi-storey car park near to an urban residential area. One adjective to describe SKYDOME? Eco-sustainable. Why? Simply because this formwork system allows reduced steel and concrete consumption, avoiding the use of timber panels. Moreover, the formwork is reusable! Thanks to SKYDOME it is finally possible to build bi-directional waffle slabs with increased spans between the columns and reduced slab thickness: everything in an eco-sustainable way.
