

GEOCROSS specification

GEOCROSS roll-in anchored ground reinforcement paver plates, size 58 x 58cm, 3.5 cm deep, made of Geoplast Gralene HD 100% black-color regenerated material, UV-stable and corrosion-resistant.

Each paver shall consist of 16 octagonal elements with an octagonal hole in its center, grouped into 4 sectors with 8 a flexible "V" shaped expansion joints between each sector, with a closed surface area of 60%. Each paver shall have 8 male connectors and 8 female connectors on its sides.

The pavers shall be installed into well-established grassed areas, joined and laid directly onto the designated surface and rolled into it using a vibrating road roller of adequate weight.

Make sure that the ground shall be free-draining.

Installation should only take place when the ground is soft enough to allow the pavers to be rolled in easily and completely. In either dry or very wet or muddy conditions should be avoided.
